

Please Keep off Drifted Medical Wastes

The Ministry of the environment, Japan announced that medical wastes have been drifted along the coastlines of the Sea of Japan and called for attention to them.

In response to this, Toyama Prefectural Government has carried out beach patrol, in cooperation with coastal municipalities, and found drifted objects such as syringes and collected them on the beaches in Toyama City and Takaoka City.

It is possible that more medical wastes will be drifted to Toyama, so, when you find any medical wastes on the beaches or other areas, please DO NOT touch them and REPORT immediately to the Public Works Center, Public Works Office or municipal offices in your area.

(Drifted wastes found on the beach in Toyama City: Dec. 1)
